

Fig. 1. **A.** Location of the Punta Morales and Cocorocas intertidal flats. Punta Morales Peninsula, mid upper Gulf of Nicoya estuary. Pacific, Costa Rica. (10°N - 85°W). 1. Tempisque River, 2. Tárcoles River, 3. Lagarto River. **B.** Sand mud flat. **C.** Sand flat. Two islets (outlined in A) are visible in the background. Note horizontal dark band marking high tide level on the tree islet.

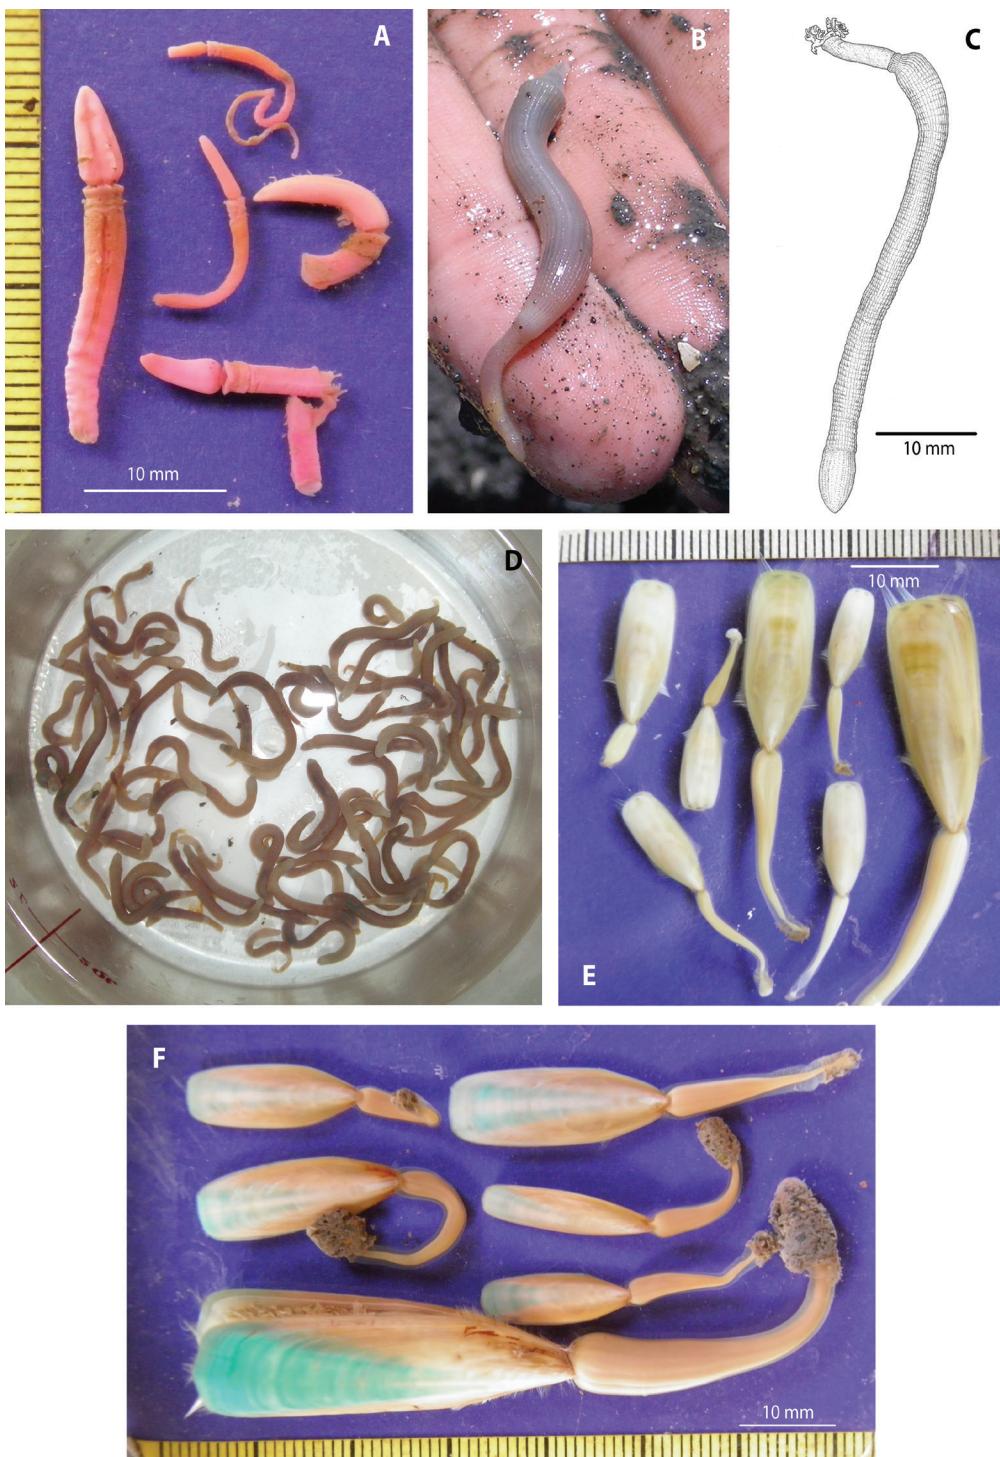

Fig. 2. **A.** Anterior regions (proboscis, collar, and part of trunk) of five Rose Bengal stained acorn worms. **B.** Live *Sipunculus nudus* collected at the sand flat. **C.** *S. nudus* drawn from live specimen. **E.** *S. nudus* during the 72 h depuration process. **D.** *G. albida*. Note setae bundles. **E.** Rose Bengal stained *Glottidia audebarti*. Note pedicels end with agglomerated sand grains.

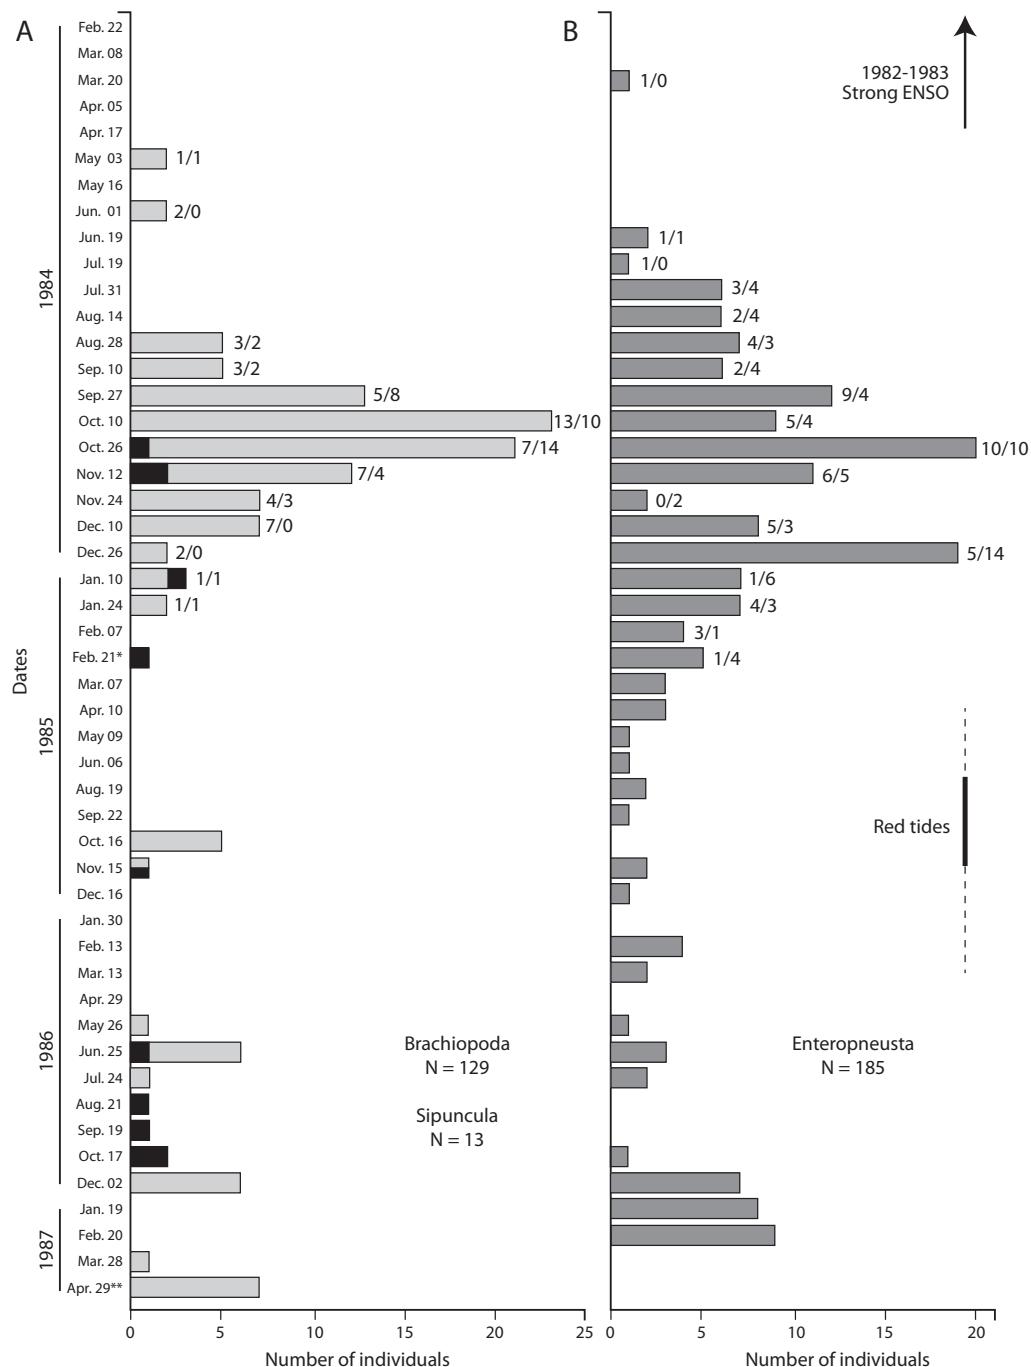

Fig. 3. Number of individuals per date (49 dates) of: **A.** Lingulid brachiopods (Brachiopoda, light grey bars) and peanut worms (Sipuncula, black bars). **B.** Acorn worms (Enteropneusta, light gray bars) found in a 400 m² sampling plot at the Punta Morales intertidal sand-mud flat, Gulf of Nicoya estuary, Pacific coast of Costa Rica (1984-1987). Feb. 22, 1984 to Feb. 21, 1985: Semi-monthly sampling of two sets of 14 cores per date. Numbers of acorn worms and brachiopods found on each 14 core set are indicated on the top of the bars. Sipunculans were found on one of the sets. Mar. 07, 1985 to Apr. 29, 1987: Monthly sampling of 14 cores per date. Core area 17.7 cm², core depth 15 cm. Mesh screen: 500 microns.

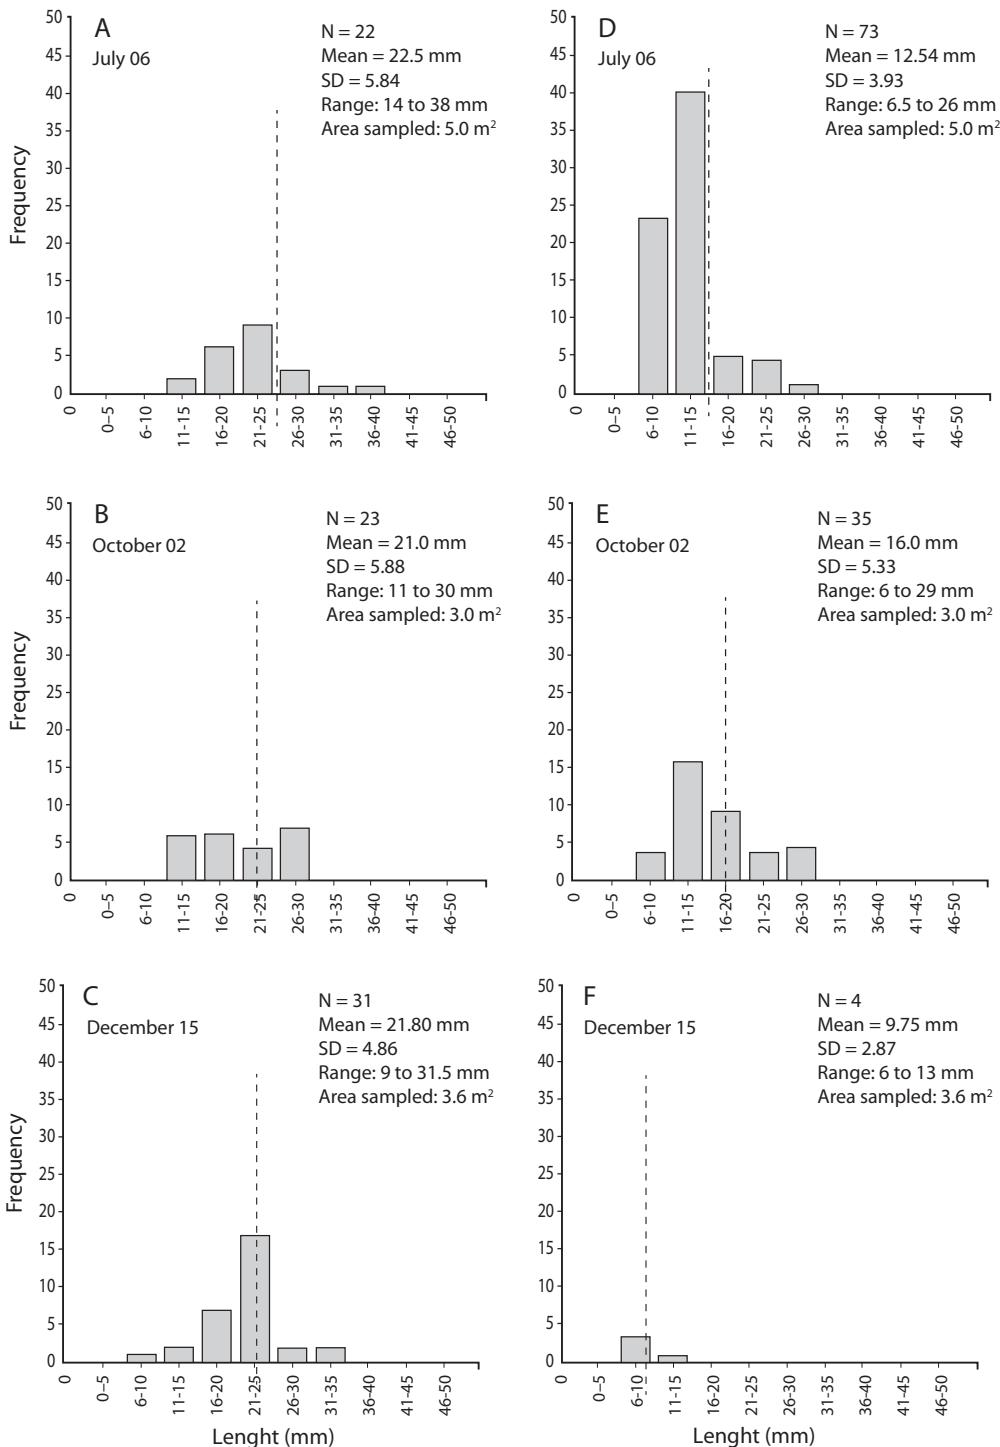

Fig. 4. Arbitrary shell length groups (mm) of brachiopods: **A, B, C.** *Glottidia audebarti*. **D, E, F.** *G. albida*. Specimens collected on July 2 (early rainy season), October 6 (mid rainy season), and December 15 (dry season) 2015. Cocorocas sand flat, Gulf of Nicoya estuary, Pacific, Costa Rica. Vertical dashed lines = mean lenght of individuals.

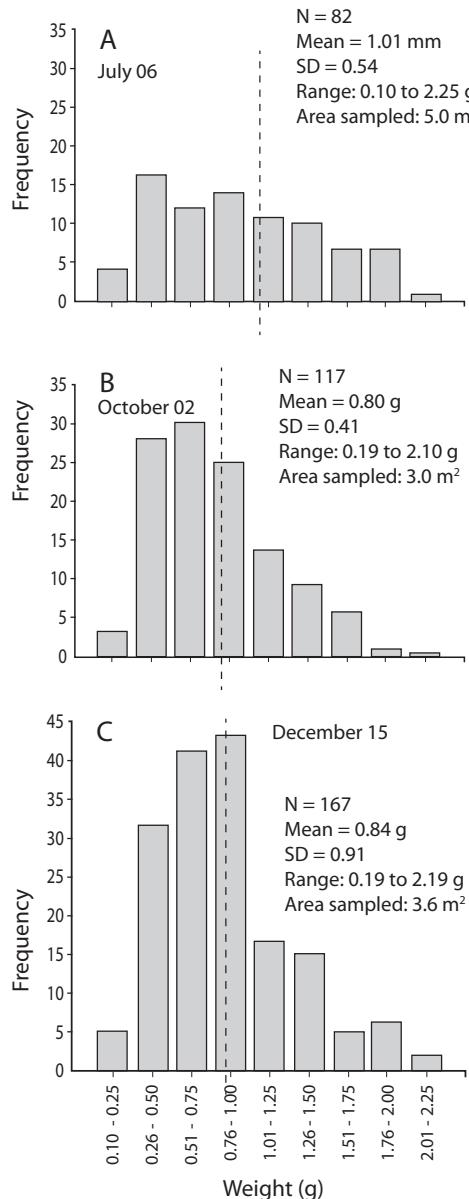

Fig. 5. Arbitrary weight (grams) groups for the sipunculan *Sipunculus nudus*: **A.** July 2 (early rainy season), **B.** October 2 (mid rainy season), **C.** December 15 (dry season), 2015. Cocorocas sand flat, Gulf of Nicoya estuary, Pacific, Costa Rica. Vertical dashed line = mean weight of individuals.

TABLE 1

Mean percentages of dry sediment fractions retained on sieves. Lower size (microns) limit of particles: Granules (2000), coarse+very coarse sands (1000), medium sand (500), fine sand (250), very fine sand (63). Silt+clay: fraction washed thru a 63 micron mesh sieve. Percent organic matter content (by combustion at 450oC). **A.** Punta Morales sand-mud flat (1984, n=10). **B.** Cocorocas sand flat (2015, n=3). Gulf of Nicoya estuary, Pacific coast of Costa Rica

	Granules	Coarse+Very coarse	Medium	Fine	Very fine	Silt+clay	Organics	Total
A.	0.7	0.8	3.3	46.4	15.1	31.5	2.0	99.8
B.	3.7	10.7	9.1	29.2	41.7	5.6	3.0	100

TABLE 2

Mean (n = 4) metal concentrations (+- Standard Deviation) in non-depurated whole *Sipunculus nudus* (Sipuncula), in tissues and shells of *Glottidia audebarti* (Brachiopoda), and in sediments. Unpublished data from Vargas, J.A. & M.I. Abdullah, 1996, AAS (Atomic Adsorption Spectrometry, Dept. of Biology, University of Oslo, Norway).

Cocorocas intertidal sand flat. Gulf of Nicoya estuary, Pacific, Costa Rica. March, 1996.

Concentrations in µg/g dw, except for iron (mg/g dw)

Species / metal	Fe	Cr	Zn	Pb	Cu	Cd
<i>S. nudus, whole</i>	5.4 ± 0.7	11 ± 5.0	56 ± 2.0	9.3 ± 0.2	26 ± 2.0	1.2 ± 0.5
<i>G. audebarti, soft parts</i>	1.60 ± 0.07	1.5 ± 0.1	123.5 ± 7.5	239 ± 0.65	7.9 ± 0.2	5.20 ± 0.15
<i>G. audebarti, pedicles</i>	0.48 ± 0.01	2.1 ± 0.1	42.6 ± 0.1	2.4 ± 0.1	31.4 ± 0.2	0.37 ± 0.02
<i>G. audebarti, shells</i>	0.57 ± 0.07	4.7 ± 0.8	73.7 ± 0.1	21.0 ± 0.6	12.88 ± 0.01	3.86 ± 0.01
Sediments	25.8 ± 5.3	31.5 ± 0.5	62.6 ± 0.5	21.1 ± 0.2	36.2 ± 0.2	1.10 ± 0.02
Blanks	<0.04	<0.02	0.06	<0.05	<0.02	<0.01

TABLE 3

A. Metal concentrations in whole soft tissues of the deposit feeder *Sipunculus nudus* (Sipuncula).
B. Length of body (mm) and weight (g) of blotted-dry live non-depurated, and after 72 hour depuration of individuals of *S. nudus* (n = 42). **C.** Metal concentrations in sediments. All concentrations in µg/g dw except for iron (mg/g dw). Cocorocas sand flat, Gulf of Nicoya estuary, Pacific coast of Costa Rica. March 8, 2000
